Pred. No. is the number of results predicted by chance to have a

em_htgo_mus:* em_htgo_other:*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NOTE: This is a "working draft, sequence. It currently consists of a contige. The true order of the piaces is not known and their contige are the true as exercises of the apparacounting are represented as runs. No that the exact sizes of the gapes conting are represented as runs. No that the exact sizes of the gapes are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               112414. .121043

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the cotal score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAGTATCGGAATGGCCACCACGAGGAGGTGGAGAGCCCCTTTCAGGGGCGCCTGCAGTGGAAT 660
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 cerrecerrecensersaserracecresesesandadesesasesaseses 60
                                                                                                                                                                                                                                                       The present sequence is given in the claims of a Specification realating to a novel family of beta mub-nuit processes from a novel family of beta mub-nuit processes from a novel sequence sedium channel. Hamma and rate beta sub-nuits, which have been collectively identified as beta! have been isolated. The polymucleotides and polypepticides are used in for seveneing for agenties and antagonists of sociam channels. The agonists, antagonists processes and nucleic social may be used disapposing of treating diseases or conditions associated with voltage-gated sociam channels, as path, Monthrow, Esthewark, heart disease, according themselve.
                                                                                      Novel nucleic acids encoding a beta-3 subunit from a voltage-gaved sodium channel, and their corresponding polymeptides, useful for detecting and treating sodium channel-associated conditions, e.g. pain, epilepsy and stroke -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GCCACCACCACGTGGTATGGTTCTACAGGCCCGAGGGCGGTAAAGATTTCCTTATTTAC

                              The invention values to polyunalcules (DANSISA AAKSIS) and the concided pulsages AAKSISA) and the concided pulsage the polymential of the satishir activity abiting to cytochine of proliferentiation or which may induce production of other optoximas in other cell populations. The polymucleotides and polypeptides are useful in deser bareay. Waccines or peptide thereay. The polypeptides have various cytokine-like activities, e.g. seem cell growth factor activity, heasaropolesis regulating activity, tissue growth factor activity, immunomodulatory activity and extinifyinhis activity and may be useful in the diagnosis and/or regeneral concerns a property factor activity increases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, cytokine; cell proliferation; cell differentiation; gene therapy; veccine; pepticle thrapy; stem cell growth factor; hadmatopolesis; inminomodilatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation; se.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        906 GGACATCCCATGTTCAGCAATGTCAATGGCATCAGGAGGGCGCCCCCAAGGGCCCCCATCGC 965
                                                                               The invention provides a novel beat-like sub-unit for voltage-gated codium ion channal polyperide, pecifically a sensory neurone specific channel (885) subunit. The novel betal-like subunit is useful for channel (885) subunit. The novel betal-like subunit is useful for setting to producing a theorepactic organic which is useful in a patient. The subunit can be expressed by standard accombinant methodology. The present sequence represents a human novel sodium channel betal-like subunit emodaing cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                648

proceins from a variety of organisms, including human, dog, cat, horse, cow, pig, handrer, mondey, madeaque, yeast, bacteria, fruit fly, sea urchin and constor. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in disgnostice, for forcemize, gene mapping, identification of muttation, to assesse biodiversity and for mutritional purposes. The present sequence is a cDNA biodiversity and for mutritional purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides the account of coding sequences of the rate of coding memory of the coding memory of the coding memory of the coding memory of the control of the coding memory of coding memory of the competion mero and citizen extensory or preceptive mero impulses. In the seveblishment and endurance of mood, restricted enterstains and sleep discorders and all the control of mesor of mood, restricted memory memory of the coding memory of the coding memory of the particular discorder and varcular form of the particular discorder and varcular non-the coding and disgnostic assays, and in pharmacogenomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New rat sodium channel beta-3 subunit gene isolated from a rat dorsal reconstruction cols library for use in chromosome mapping, forensic medicine, monitoring clinical trials and therspeutics -.

Rat beta3 subunit cDNA.

```
involved in the generation of pain and other sensory or perceptive nerve impulses, in the establishment and endurance of mood, neurodepenerative and stabep disorders, and in the control of muscle contraction, including movements such as the heartbear, dispection and vascular cone. The sequences can be used in predictive medicitie, screening and diagnostic.
                                                                                                                                                                                                                                                                                                        assays, and in pharmacogenomics.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present exquence is given in the clime of a specification relating to a novel family of beta sub-unit proteins from a voltage of a columnic. Hamma and rate best sub-units, which have been collectively identified as beta; have been isolated in the polymeclectides and polypeptides are useful for screening for agonists and antagonists of sodium channels. The agonists, autagonists or conditions associated with voltage-gated sodium channels, e.g. pain, spinghow, estroke, isohameia, heart disease, accobase systomes, familial Nondramaffin Paragnafilma, Phenylecomita and Charcom, Familial Nondramaffin Paragnafilma, Phenylecomita and Charcom Familial Nondramaffin Paragnafilma, Phenylecomita and Charcom Familial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel nucleic acids encoding a beta-3 subunit from a voltage-gated sodium channel, and their corresponding polypeptides, useful for selecting and treating sodium channel-associated conditions, e.g., pain,

This protein is livolved in the generation of pain and other sensory or perceptive nerve famplises. An the sexabilisement and enformation of mod, neurodesenseative and steep disorders, and in the control of mascle contraction, including movements such as the beartheart, delegation and vascular comes. The sequences can be used in predictive medicine, sorteening and diagnostic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and colding sequences of 973 human restrictlar antiques, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, repproductive system, immune, respiratory, na marchosgical and agastroinmental disorders, infections, and exticulary cancer, see sepecially restrictlary cancer. The present sequence is a DNA encoding a protein fragment of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                33 AGGTGGCCTGAACACCTGAAGGACTGGACATCCCATGTTCAGCAATGTCAATGGCATCAG 92

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Group Annea V. M. I. The man. The form of the Annea Search Analysis of the mouse transcriptome based on functional annotation of 60,770 full-langth copys.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The FANTOM Consortium and the RIKEN Genome Exploration Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Functional annotation of a full-length mouse cDNA collection
Nature 409 (6821), 685-690 (2001)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (Rattus norvegicus), full insert sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Carninci, P. and Hayashizaki, Y.
